

GHX Marketplace **Bill Only**

**Supporting Clinical Staff As
They Support Their Patients**

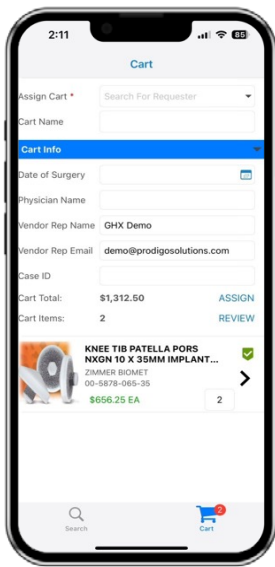

Automate, Approve, Audit

GHX Marketplace Bill Only is a virtual ecommerce solution that aims to maximize sustained cost savings of bill-only implant and consignment order related spend throughout healthcare supply chain by driving contract utilization and efficiencies at the point of use.

This bill-only implant and consignment order solution provides data at the point of demand, enables formulary management, and helps improve transaction automation.

GHX Marketplace Bill Only extends the reach of quality, accurate content and pricing to a health system's end-user community, drives item and price compliance across the procure-to-pay lifecycle, and delivers an enhanced user experience, improving supply chain control while simplifying the requisition process. This enables the procurement process to begin with the right product at the right price from the right source, therefore reducing the potential for matching errors, but most importantly, mitigating risk of clinical variation in patient care.

GHX Marketplace Mobile Edition

The GHX Marketplace mobile edition application makes it easy for users to quickly search for or scan item barcodes while on the go, eliminating the need to manually enter orders.

With the mobile edition, clinical staff and/or suppliers can access their approved GHX Marketplace item catalog and content on their mobile device to build an order for items used in a procedure as documented on the case ID sheet.

Mobile edition is available on Apple or Android devices.

Together, GHX Marketplace Bill Only and mobile edition help solve the complexities of bill-only implant and consignment order documentation.

Key

Benefits

Streamlines reconciliation and provides visibility in the procurement lifecycle

Decreases manual order entry, helping to reduce match exceptions

Enhances savings initiatives and ensures accurate cost and charge capture

Intuitive and efficient workflow ensures quick adoption by users and consistent processes

Shortens time period between date of procedure and invoice paid date

Formularies reveal approved, contracted items with accurate pricing

Items used within a procedure captured at point of use, driving compliance and managing risk

Gives supply chain leaders control of the front-end item formulary
