

## GHX Marketplace with **Bill-Only**

**Supporting Clinical Staff As  
They Support Their Patients**

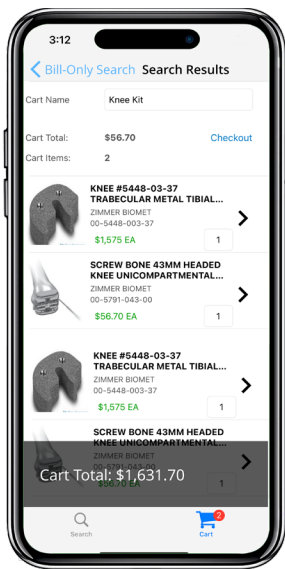

### GHX Marketplace

GHX Marketplace is an ecommerce solution that enables maximum, sustained cost savings throughout the healthcare supply chain by driving contract utilization at the point of requisition. The online requisitioning tool enables best business practices and reduces clinical disruption and time spent on administrative tasks.

GHX Marketplace controls the entire health system spend, provides maximum data transparency into purchasing behavior across multiple locations, and increases compliance and utilization, ultimately uncovering impressive soft- and hard-dollar savings.

Through GHX Marketplace, GHX handles the maintenance, cleansing and enrichment of your ERP item master as well as access to a specific virtual item formulary of all health system contracted products with pricing. This enables the procurement process to begin with the right product at the right price from the right source, therefore reducing the potential for matching errors on the payment side, but most importantly, mitigating risk of clinical variation in patient care.

## GHX Marketplace with Bill-Only

A key functionality to GHX Marketplace is GHX's bill-only solution and mobile app, GHX Marketplace Mobile Edition. This combination helps narrow a major gap in supply chain by integrating bill-only workflow with any ERP or MMIS; helping health systems solve the complex problem of bill-only item identification and documentation.

GHX's bill-only solution streamlines, automates and ensures full visibility of items used during surgeries and operations throughout the entire procurement lifecycle. Item scanning via Mobile Edition is fast, easy and accurate, eliminating the need to manually enter orders.

Together, our bill-only solution and Mobile Edition help shift the burden of order entry from clinical staff to the suppliers.

## Key

## Benefits

Gives supply chain leaders control of the front-end item formulary

Intuitive and efficient workflow ensures quick adoption by users

Formularies reveal approved, contracted items with accurate pricing, enabling users to quickly find the right items from the right source at the right price

Decreases administrative tasks for clinical staff and increases patient care

Transparency of items used within a procedure captured at point of care, driving compliance and managing risk

Passes pertinent data from clinical to non-clinical teams

Ensures use of value analysis-authorized items

Shortens period between date of procedure and invoice paid date

Enhances savings initiatives and ensures accurate cost and charge capture

Streamlines reconciliation and provides visibility in the procurement lifecycle; reducing manual processes and match exceptions
