

Smart catalogue management - so much more than just compliant data

More accurate, complete data in business transaction documents means happier customers at a lower cost to you – **Wouldn't that be great?**

Simplified path to compliant data with the only healthcare-focused GDSN-certified data pool. **Imagine that.**

One catalogue management system, meeting your customer requirements, including those for the NHS – **Job done.**

➤ HealthNEXUS smart catalogue management - so much more than just compliant data

The HealthNEXUS catalogue management solution enables you to efficiently manage all your catalogue data in one place, so you, your customers and potential customers have access to it. Moreover, you can load your catalogue data to the only healthcare-focused GDSN-certified data pool – trusted by dozens of multinational healthcare suppliers. Get ahead and take steps to become compliant with the NHS eProcurement Strategy.

13,000,000

up-to-date, accurate, ready to order
catalogue items in our system.

Be part of it...

Experiencing these challenges?

Frequent updates of your catalogue?

Spending too much time on frequent requests for ad-hoc catalogue updates in response to customer requests?

Product and pricing data, the way the NHS wants it. What does it mean to you?

Feeling overwhelmed by the complexity of the eProcurement Strategy and the need to prepare your data in a GS1-compliant way?

Information on orders from your customers not matching your latest product catalogue?

Frustrated with numerous follow-ups on orders that contain errors? What if your customers had access to your clean, up-to-date, product data?

Benefits of HealthNEXUS

Efficient catalogue management simplified

- Import, update, manage and publish your catalogue data in one place.
- Increase the quality and get control of your catalogue data, and drive visibility of it internally and to your customers.
- Eliminate the time you and your team spend on fulfilling customer catalogue requests.
- Advance the catalogue management process even more! We can help automate the aggregation of product data information from your disparate systems and the feed of updates.

HealthNEXUS – your companion to compliance

- Prepare your data for compliance with the product and pricing attributes required by the NHS and other markets.
- Classify your data and enable the NHS staff to find your products quickly and easily.
- Enrich your data with GTINs and publish your GS1-compliant data to the only healthcare-focused GDSN-certified data pool.

Your product data at your customers' fingertips

- Raise your brand profile by making your products and relevant information visible and accessible by the NHS and other current and prospective customers.
- Improve customer experience and satisfaction levels by delivering clean, classified, meaningful catalogue data.
- Benefit from the GHX unique healthcare community and established interfaces for supplier catalogue distribution to purchasing systems within hospitals.
- Make your product catalogue items part of the richest and most utilised catalogue system in the GHX community of connected hospitals and buyers.

Business automation savings start with clean data

- Having customers use your most up-to-date catalogue data when placing orders is the way to drive cleaner, reduced-error transactions.
- As you move from manual to electronic transacting through the PEPOL network, mitigate the extra costs incurred due to wrong ordering, expedited shipment charges or returning goods.
- Free up time for your customer service team to focus on improving customer satisfaction.

How HealthNEXUS works

Upload your catalogue through the intuitive online user interface or 'push' it directly from your own system into HealthNEXUS. Once you are set up on HealthNEXUS, you will be able to manage and store all your data in one place and publish it to your customers.

HealthNEXUS will make the right catalogue data information available to your customers at the time and in the format they need it. Whenever you update your data in HealthNEXUS, the system will automatically send updates to all connected healthcare buyers as well as notify your buyer community. What's more, HealthNEXUS will also become the single place for publishing your catalogue to GHX's GDSN data pool for compliance with the NHS eProcurement Strategy.

Features at a glance

- Compliant with a variety of market-specific coding, such as GS1 GLNs, NHS-eClass, and other practices.
- Intuitive user interface for all your catalogue management tasks:
 - Import and update your catalogue.
 - Verify data compliance and quality before publishing.
 - Resolve issues, make and approve changes, and publish in real time.
 - Push your catalogue and catalogue updates to all customers in one go.
 - Store, view and search all your catalogue items in one place.
- Interconnected with GHX Exchange and other GHX solutions enabling electronic document transmission:
 - Enables validation and enrichment of data within transaction documents (such as purchase orders) using your catalogue data as 'the source of truth', as maintained by you in HealthNEXUS.
- Integration with your ERP system (or other product information system) for automatic sending of catalogue data updates (upgraded version required).
