

Exchange Enterprise

Supply Chain
Insight For Everyday
Improvements
**and Preparation For
the Unexpected**

Calling for a Responsive, Resilient and Agile Supply Chain

Exchange Enterprise lays the groundwork each day to optimize supply chain and to prepare for changing conditions. Your teams can focus on more strategic activity with expanded automation and exclusive functionality that provides consistent and reliable data. And access to the only credentialed trading platform means you can expand your approved vendor list when needed with speed and confidence.

A unified solution suite for new levels of automation and visibility from order to invoice.

Automation and visibility drive process resiliency, facilitate workforce agility/productivity and enable your buyers to be problem-solvers, not transaction processors

Comprehensive supply chain analytics provide a clearer picture of operational and financial performance

Vendor Compliance Insight lets you proactively address new supplier quality assurance and gives you visibility into sanction and financial data at the order level to help you avoid potentially costly vendor relationships and protect patients

Common gaps in process automation and visibility

- **Siloed systems:** Fragmented or missing data can't support decisions, potential risks and opportunities for improvement are hard to spot
- **Lack of integration:** Lag time and stale data prohibit agile teams
- **Manual processes:** that require more people: Time-consuming and error-prone activity limits your ability to scale and adapt to disruptions

Achieve the perfect order — no exceptions or issues while also improving contract price alignment. And, broad visibility across the supply chain allows you to uncover patterns and apply holistic solutions for long-term success.

An Interconnected, Scalable Supply Chain Platform

Compliance

Connect credentialing and supply chain

Purchasing

Accurate and on time

Contracting

3-way price match to correct contract pricing

Accounts Payable

Invoice match to purchase order and confirmation

Increase automation and connectivity with trading partners from order to invoice

Features & Benefits

- **Increase acknowledgment rates** across all order channels, including email and faxes.
- **Automate invoice processes** for data capture and visibility, and reduce manual invoice exceptions.
- **Set specific spend goals** with data by category to identify products to move on contract.
- **Be alert to upcoming auto-renewals** and increase contract price alignment with a three-way price match.
- **Updates on catalog price file and sales tracing data** with trading partners improves cost savings and customer service levels for self-distributing IDNs.
- **Only Exchange Enterprise can offer Compliance Insights** to help you safeguard revenue, reduce risk and avoid fines from doing business with sanctioned vendors.
