GHX

NEXUS

Access accurate, industry-leading product and pricing data all in one place

Managing catalogues and product data from multiple sources can be a time-consuming, manually intensive process that leaves healthcare providers open to order and invoice errors.
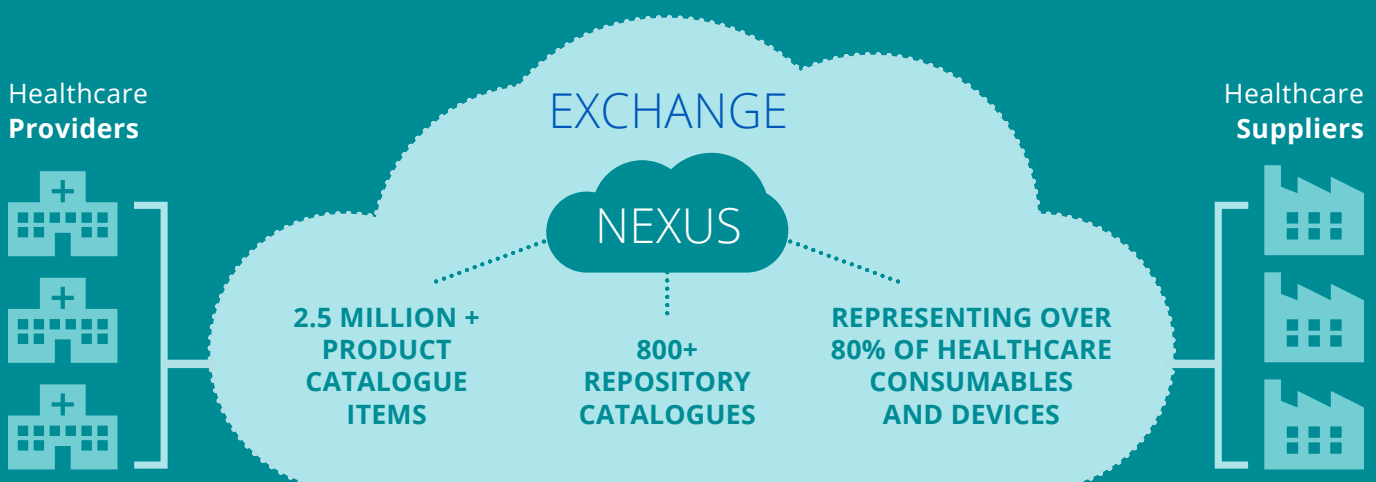

What if you could access accurate, up-to-date product and pricing information all in one place, saving your staff time and reducing the risk of incorrect orders?

With over 800 supplier-managed catalogues backed up by the latest GDSN data, NEXUS from GHX is designed to give you all that and more.

Comprehensive supplier-managed catalogues for more efficient purchasing

Our cloud-based catalogue management system hosts hundreds of repository catalogues from healthcare suppliers across Europe, allowing buyers to search more than 2.5 million approved catalogue items.

The web-based user interface makes it easy to find the products you need, creating a more efficient purchasing process, and you can upload your own catalogue and contract data.

Achieve more accurate ordering with automatic item updates

Item details, including Global Trade Item Numbers (GTINs), are maintained directly by suppliers through their systems and via the Global Data Synchronisation Network (GDSN). Automatic notifications let you know when updates are published, so your staff are working with the latest data.

NEXUS can also connect with your existing ERP and inventory management system, allowing you to accept and publish or reject supplier updates, for more accurate ordering, improved invoice matching and better contract compliance.

KEY FEATURES AND BENEFITS

Intuitive cloud-based technology

- User-friendly interface
- Supports supplier and buyer managed content
- Cloud-based data storage

Efficient product data and contract management

- Manage, maintain and validate product and contract data
- Upload and manage data at a more granular level
- Workflow approvals

Greater visibility of shared data

- Distribute product data to your ERP/MMIS and other systems
- Share catalogue and contract data with your healthcare partners

Industry and regulatory standards compliance

- Maintain compliance with industry standards and regulatory needs
- Access supplier GDSN data
- GS1 compliant GTIN validation – supports Scan4Safety

Increase collaboration with suppliers

- Use as a portal to facilitate engagement and onboarding of suppliers
- Collaborate with suppliers to upload, maintain and validate catalogue and contract data

Supports clean orders

- Use clean product data to create more clean orders
- Save time and money by reducing the need for manual resolution of order queries and invoice pricing issues
